Kyriq SEO Report

26 October 2026

kyriq.com has gone from one page Google could barely read to 37 indexable pages built around the searches bookkeepers make.

What changed

Google could not read the site map or crawl instructions: both sent search engines to the login page. That is fixed, and every page now tells Google exactly what it is.

Area	Before	After
Pages Google can index	1 (homepage)	37
robots.txt / sitemap	Redirected to login	Live, listing every page
Login and signup pages	Indexed as copies of the homepage	Hidden from search
Rich results (FAQ, pricing, breadcrumbs)	None	On every page
Searches the copy targets	"check reconciliation" only	~60 terms incl. QBO, cheque, uncleared checks, OCR
Canada and UK ("cheque")	Not targeted	Dedicated pages
Page speed on public pages	Login check ran on every visit	Skipped, faster first load

Every page was checked against an independent audit rule set (open-seo): 0 broken links, 0 orphan pages, 0 title or description problems.

New pages

The positioning is reconcile-first: competitors (DocuClipper, SaasAnt, Dext, Hubdoc) stop at extracting or importing checks, and none clears them inside QuickBooks. Every page leans on that gap.

Group	Pages	Example searches targeted
Features	4	check reconciliation quickbooks online, handwritten check OCR, bulk check processing
Who it's for	5	accounting firms, bookkeepers, property management, churches and nonprofits, construction
Canada and UK	2	cheque reconciliation quickbooks, outstanding cheques
Comparisons	5	docuclipper / saasant / dext / hubdoc alternative, quickbooks check scanner alternative

How-to guides	8	checks not showing as cleared, clear outstanding checks, import checks into QBO, handwritten checks
Pricing	1	check reconciliation software pricing
Free tools	2	MICR line decoder, outstanding checks template

The guides answer the questions bookkeepers currently take to the Intuit Community forums, where answers are often stale or end in "do it manually".

Decisions needed

The approved homepage copy and FAQ are unchanged. These need a decision before or soon after launch:

- ☐ **Homepage headline.** "See every check. Approve exact matches together." has no search term in it. Proposed: "Check reconciliation for QuickBooks Online: match and clear every check", keeping the current line as the subheading.
- ☐ **Fact-check the guides and comparisons.** A few QuickBooks menu paths and competitor details (prices as of October 2026) should be confirmed by someone who uses QBO daily.
- ☐ **Canada and UK.** Confirm a Canadian and a UK QuickBooks Online company work end to end before promoting those pages. Plans bill in US dollars.
- ☐ **Analytics.** Choose Google Analytics 4 or Plausible (Plausible avoids a cookie banner).
- ☐ **"Cheque" wording in legal pages and emails.** Leave as is, or align to "check" with legal review.

Next steps

Search results build over months: expect the first rankings 4 to 8 weeks after launch, with the comparison and guide pages carrying most early traffic.

1. **Launch (week 1).** Deploy; verify the site in Google Search Console and Bing Webmaster Tools; submit the sitemap; add analytics; make the www address redirect permanently.
2. **Get listed (weeks 1 to 4).** Publish the Chrome Web Store listing and link it from the site; complete the QuickBooks App Store listing; set up Capterra, G2 and GetApp profiles and ask the first customers for reviews.
3. **Grow content (months 1 to 3).** Two new guides a week from the keyword plan; a short YouTube video per guide; pages for medical billing and other check-heavy industries.
4. **Earn mentions (months 2 to 6).** Helpful answers in the Intuit Community and r/QuickBooks linking to the guides; pitch inclusion in "best check OCR / reconciliation software" lists, the format AI search cites most.
5. **Measure monthly.** Search Console review, and an automated before/after check that flags any page that loses its title, description or structured data.

Measure	Target

Pages indexed by Google	30+ by month 3
Searches ranking top 10	15+ lower-competition terms by month 6
Signups from search	Tracked from launch

The full technical plan, keyword list and competitor research are in the project repository (docs/seo/SEO-MASTER-PLAN.md).
